IBEX 35® TARGET VOLATILITY STANDARD Indices

Index Description

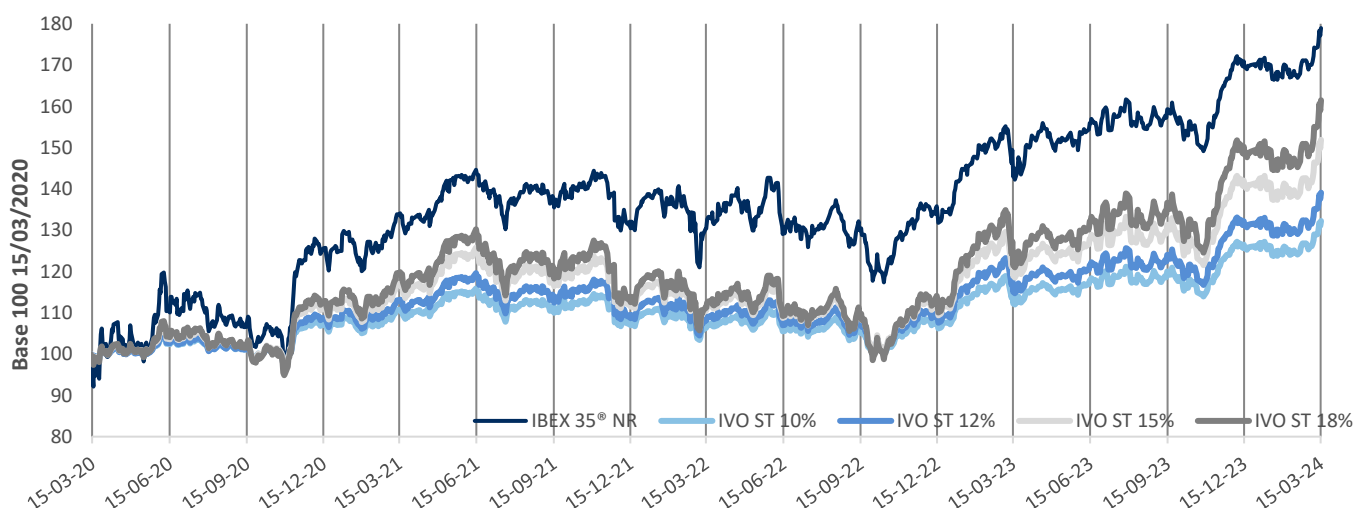

Bolsas y Mercados Españoles (BME) calculates, publishes and disseminates in real-time the IBEX Index. BME, the company that integrates the principal securities markets and financial systems in Spain, is Europe's fifth biggest exchange operator by equity turnover according to data from FESE. The equity turnover for March was 29,362 billion euros and the number of trades amounted to 2.84 million.

The Target Volatility indices series bases its strategy in a combination of investments in Equity and risk free fixed income. These indices strategy is to limit the investment risk to achieve this goal they set a volatility target and distribute the investment between Equity and risk free fixed-income according to market conditions.

Index Methodology

The IBEX 35 Target Volatility are strategic indices based on IBEX 35. The indices are Euro-denominated and are calculated at the close of the market. The Standard series, which owns an initial capital and divides it to invest a proportion in Equity and the rest of it in risk free fixed-income.

The volatility calculation is done by an EWMA model based on historical data. The four levels of target volatility are 10%, 12%, 15% and 18%.

The investment in Equity is made specifically through an investment in the IBEX 35 Net Return with a maximum leverage level. The investment in fixed-income obtains a return according to €STR (Euro short-term rate).
